

ROUTINE WATER QUALITY MONITORING OF KONGBA RIVER

As part of its continued efforts towards pollution abatement and rejuvenation of rivers in Manipur, the R&D Laboratory, Department of Environment & Climate Change, Government of Manipur, conducted routine water quality monitoring of the Kongba River on 16 September 2026.

During the field exercise, the technical team carried out on-site water quality analysis and collected water samples from different stretches of the Kongba River. Effluent samples were also collected from the 16 MLD Sewage Treatment Plant (STP) at Heirangoithong Maibam Leikai for detailed laboratory assessment.

The monitoring was undertaken in compliance with the directions of the Hon'ble National Green Tribunal (NGT) and as part of the Department's continuing measures for the restoration and rejuvenation of rivers in Manipur.

The data generated through the monitoring exercise will contribute to strengthening the Department's MIS Database and support the formulation of appropriate action plans and interventions for pollution abatement and improvement of river water quality.

Department of Environment & Climate Change, Government of Manipur remains committed to protecting the State's rivers and promoting a cleaner and healthier environment.

Glimpses from today's field monitoring and sample collection activities along the Kongba River and at the STP.
